

## HQ-ENV-N-3001 – Environmental Management System (EMS)

# APPENDIX A – EMS Application

Hydro-Québec generates, transmits and distributes electricity, mainly using renewable energy sources, in particular hydropower. Its sole shareholder is the Québec government.

The company's environmental management system (EMS) covers the following activities:

- Electricity generation
- Electricity transmission
- Electricity distribution
- Construction (related to developing and maintaining infrastructure)
- Innovation
- Operations support
- Support for company management

The EMS therefore applies to all of the company's activities, i.e., Hydro-Québec's business units. It is important to note that the nuclear decommissioning activities carried out at the Gentilly-2 facility and the activities of the Groupe – Audit interne are not covered by the EMS.

The company's activities are presented using processes based on the value chain of our product—green, renewable electricity.
